

ANNET FELLY ATEMBA

+254 769 078 438 | annetatemba0@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Cybersecurity professional specializing in detection engineering, threat hunting, and incident response. Experienced in building detection-as-code engines, deception infrastructure, and conducting full-scale forensic investigations. Skilled in Python and Bash automation, AWS cloud security, and tools including Wireshark, Nmap, Suricata, and Burp Suite. Collaborative communicator translating technical findings into actionable hardening recommendations.

KEY SKILLS

Detection Engineering & SIEM: MITRE ATT&CK, Detection Rule Engineering (Sigma/Suricata), SIEM Log Analysis & Triage, Alert Automation & Tuning, Threat Intelligence (STIX 2.1), Honeypot Deployment

Network Defense: Suricata/Zeek IDS, Linux nftables Firewalls, containerlab, Wireshark/PCAP Analysis, VLAN Segmentation, Anti-spoofing Policies

Incident Response: NIST SP 800-61r2 (PICERL), Digital Forensics & IR, Auth-log Forensics, Regulatory Reporting, Root Cause Analysis, Adversary Emulation

Cloud Security: AWS GuardDuty, CloudTrail & CloudWatch, IAM Least-Privilege, Infrastructure as Code, Docker & Containers, CI/CD (GitHub Actions)

Development: Python, TypeScript/JavaScript, C# (Unity), Bash/Shell Scripting, Next.js/NestJS, PostgreSQL/Redis

Vulnerability Assessment & Pen Testing: Nmap, Burp Suite, Metasploit, OWASP Top 10, CVE Research, Threat Modelling

GRC & Compliance: ISO 27001, NIST CSF, NIST SP 800-61, PCI-DSS, Risk Register Management, Board-level Reporting

Operating Systems & Tools: Kali Linux, Ubuntu, Windows Server/AD, Ansible, DuckDB, Git & GitHub, Prisma ORM

PROFESSIONAL EXPERIENCE

Ubuntu Bridge Initiative (UBI)

Jun 2026 - Aug 2026

SOC Analyst - Advanced Stage, Detection & Response Engineering

Remote

- Built a threat-hunting and correlation framework (Hunt Engine) that normalizes multi-source telemetry into DuckDB, reconstructs multi-stage attack chains using campaign-graph correlation, and automates 5-dimensional change-management reconciliation.
- Developed a portable detection-as-code engine with 12 semantic detection rules mapped to MITRE ATT&CK, evaluated against a 250,000-event Windows security replay with zero false positives and automated Pytest regression testing.
- Deployed automated deception infrastructure combining an Ansible-deployed T-Pot honeypot with fail-closed boundary controls and a Python pipeline normalizing 250K honeypot events into STIX 2.1 threat intelligence bundles and Sigma/Suricata detection rules.
- Engineered a 7-zone routed enterprise network detection range as code using containerlab, FRRouting, nftables stateful segmentation, mirrored Suricata IDS, and 40+ automated validation assertions.
- Conducted a full forensic investigation of a fintech breach following NIST SP 800-61r2 PICERL lifecycle - SQL injection, SSRF cloud credential theft, insider C2 beacon analysis - delivering regulatory notification, board memo, and 30/60/90 remediation roadmap.
- Identified and exploited a critical prompt injection vulnerability in an AI-powered hiring assistant via CV context injection; delivered a full technical report with remediation code across seven recommendation areas.

Self-Employed / Remote Projects

2024 - Present

- Monitored system and AWS GuardDuty logs and AWS CloudTrail events to detect anomalies and potential security incidents, performing initial log analysis & triage and root-cause analysis mirroring SIEM concepts and incident remediation workflows.
- Built Python-based automation scripts to parse logs, identify threat patterns, and generate actionable alerts, integrating GitHub Actions for CI/CD security automation and reducing manual analysis time.
- Troubleshoot network misconfigurations (DNS failures, IP conflicts) and validated remediation steps through scripted verification, strengthening incident-response discipline.
- Configured and hardened Ubuntu, Kali Linux, and Windows Server environments, applying least-privilege IAM principles and documenting security controls for repeatability.
- Performed foundational vulnerability scans using Nmap and Wireshark to identify exposed services and suspicious traffic patterns in test environments.

ICT Authority

Apr 2023 - Sep 2023

Network Attachee (Internship)

Kakamega County, Kenya

- Supported installation and configuration of networked systems, conducting post-setup security checks on TCP/IP, firewall rules, and HTTP/HTTPS access controls to verify proper enforcement.
- Troubleshoot IP conflicts, DHCP failures, and DNS errors using structured fault-isolation methodology - building systematic diagnostic skills core to security incident triage.
- Assisted in VLAN configuration and network segmentation; validated traffic isolation through Wireshark packet capture to confirm inter-VLAN restrictions were enforced.
- Managed user accounts and access permissions via Active Directory and implemented least-privilege IAM controls, identifying and remediating orphaned accounts.
- Diagnosed hardware and system performance anomalies, translating findings into detailed incident reports aligned with security documentation standards.

PROJECTS

AR Socket Safety Trainer (Unity AR Foundation)

- Built a Unity AR Foundation app that detects real electrical sockets via image tracking and overlays interactive 3D labels identifying Live, Neutral, and Earth pins with guided educational flows. Shipped as a working Android APK.

Kenya Retail POS SaaS (Full-Stack Web Application)

- Developed a full-stack multi-tenant Point of Sale platform for Kenyan businesses featuring M-Pesa Daraja STK Push mobile payments, KRA eTIMS cryptographic receipt signing, RBAC access control, and atomic concurrency-safe inventory management.

EDUCATION & CERTIFICATIONS

Masinde Muliro University of Science and Technology

2020 - 2024

Bachelor's Degree, Information Technology

Certifications:

- Certified Ethical Hacker (CEH) - EC-Council
- AWS Certified Cloud Practitioner - Amazon Web Services; AWS re/Start Graduate
- Cyber Core Associate - Ubuntu Bridge Initiative, SOC Analysis Cohort 1
